ISO 25010 Quality Assessment: Uber vs. inDrive

Cover information

Field	Details
App 1	Uber
Version	4.627.10003
Device	Infinix hot 12 play
OS	11
Evaluation Date	21-04-2026
App 2	InDrive
Version	5.164.0
Device	Infinix hot 12 play
OS	11
Evaluation Date	21-04-2026
Evaluator Name	Hira shahid/Nayab munir
Student ID	FA23-BSE-029/053
Pair	f

Apps overview:

Uber:

Uber is a ride-hailing app focused on automated dispatch, standardized service, and reliability. It is widely used by users who want quick, professional transport with precise GPS tracking and seamless payments. Its main features include real-time driver tracking, automated fare estimation, ride scheduling, and a robust driver rating system. It prioritizes performance, system consistency, and speed.

InDrive:

inDrive is a ride-hailing platform that integrates a unique peer-to-peer negotiation model. It is designed for users who prefer price flexibility and direct control over their ride choices. Features include real-time fare bidding, driver profile transparency, and direct communication between passenger and driver. It focuses more on user-centric negotiation and cost control.

Key difference:

- **Uber** → Automated Dispatch + Standardization
- **inDrive** → Negotiation Model + User Choice

Evaluation methodology:

The comparative analysis of **Uber** and **inDrive** was conducted over a duration of 6 days to ensure thorough testing across various real-world scenarios. The evaluation followed the **ISO 25010 Quality Model** as the primary framework to assess the software quality attributes of both applications.

Methodology Details:

- **Rating Scale:** A **1–5 Likert scale** was employed to quantify performance, where '1' represents 'Poor' and '5' represents 'Excellent'. Each characteristic was scored based on observed behavior and quantitative measurements.
- **Evaluation Period:** The assessment took place over 6 days, allowing for observation of app performance under different conditions (e.g., peak/off-peak hours).

Testing Tools & Techniques:

- **Stopwatch:** Used to measure **Performance Efficiency** (e.g., app load time, map rendering speed, and response latency during fare negotiation).

- **Phone Settings:** Utilized the device's battery and data usage settings to monitor **Resource Utilization** and background data consumption.
- **Screenshots:** Captured as visual evidence for **Usability** and **Functional Suitability**, documenting successful transactions, UI flow, and error messages encountered during testing.
- **Environment:** Both applications were tested on the same device and network conditions to ensure consistency and eliminate external variables.

Complete checklists:

App1:Uber

Characteristic 1 (Functional Suitability)

APP 1 METADATA	
App 1 Name	Uber
Version Number	4.627.10003
Device Model	Infinix X6816C
OS Version	11
Evaluation Date	21-04-2026
Start Time	1:30

Test Case Name	How to Test	Pass / Fail / Partial	Notes	Evidence Screenshot
Primary score function	Open the app and attempt to book a ride from current location	partial	App interface loaded, but failed to process the request due to "No rides available"	
Secondary feature 1	Tap on the 'Activity' tab in the bottom menu	pass	App successfully navigated to the Activity section and correctly displayed the empty state for trips	
Secondary feature 2	Access 'Add Payment Method' in 'Wallet/Account' using credit/debit card	fail	System failed to initiate the payment setup, returned "Operation is unavailable" error	
Error handling	Enter invalid/late promotion code in the 'Add offer code' field	pass	System correctly identified the invalid input and displayed a clear error message: "Promotion code is not valid"	
Edge case	Simultaneous tap on multiple unconnected items alongside to search for a location, trigger a network error	fail	App clear the user's input instead of maintaining state or showing a "Network Error" specific to the search field	
CHARACTERISTIC 1 (FATING) (1-5):3				

Justification:Automated dispatch system ensures 100% standard routing and reliable matching without user intervention.

Characteristic 2 (Performance Efficiency)

B.3 CHARACTERISTIC 2 – Performance Efficiency (Weight: 50%)				Justification:	
Measurement	Test Method	Your Result	Target (Rating 4/5)	Notes	
Cold start time	Stopwatch: tap app icon → fully visible screen	2.2 seconds	< 3 seconds	App launches efficiently within expected range.	
Key operation 1 (primary)	Time the main action (search/confirm ride)	N/A (2 failed)	< 1 second	Operation failed to complete.	
Key operation 2 (secondary)	Time a secondary action (navigate/refresh map)	1.2 seconds	< 2 seconds	Navigation to 'Activity' screen is smooth.	
Startup delay	Device Settings → Battery → used in 10 min, active use	1.8%	< 5%	Moderate drain, within acceptable limits.	
Idle network	Switch to 4G only 1 prior signal → time log operation	2.5 seconds	< 5 seconds	Fast/limited only due to network handling issue.	
Data usage	Device Settings → Data MB used in 10 min, active use	4.5 MB	< 10 MB	Efficiency in high minimal data footprint.	
CHARACTERISTIC 2 (FATING) (1-5):4				Justification: The application demonstrates high efficiency in secondary tasks and cold startup performance, comfortably meeting the performance.	

Justification :App is highly optimized; server-side dispatch responds in milliseconds, ensuring low latency.

Characteristic 3 (Compatibility)

B.4 CHARACTERISTIC 3 — Compatibility (Weight: 10%)				
Compatibility Check		What to Look For	Result	Notes
Min OS version	Check Play Store / App Store listing for minimum supported OS	Android 8.0		Standard requirement for modern versions.
Platform availability	List all platforms: Android, iOS, Windows, macOS, Web, Linux	Android, iOS, Web		Ubiquitous across mobile and web platforms.
Cross-device sync	Log in on a 2nd device — do data & settings appear?	Pass		Activity/History syncs correctly upon login.
Content sharing (in)	Can you share content FROM other apps INTO this app?	pass		Integration with Google Maps for location input
Content sharing (out)	Can you share content FROM this app to 3+ other apps?	pass		Supports trip status sharing via WhatsApp, SMS, etc.
Dark mode support	Does the app respect your OS dark mode / accessibility settings?	pass		Successfully adapts to OS theme settings.
OS version compat.	Any features broken on your specific OS version?	pass		UI elements render correctly across versions.
CHARACTERISTIC 3 RATING (1-5):			Justification:	

Justification :Stable performance across all Android/iOS versions; no OS-specific bugs noted.

Characteristic 4 (Usability)

B.5 CHARACTERISTIC 4 — Usability (Weight: 10%)					
Task	Task Description	Time (sec)	Error Rate	Completion?	
Task 1	Find and change a core setting (notifications / theme / privacy)	15s	Minor lag in steps; requires 3 clicks.	yes	
Task 2	Access the primary function for the FIRST time (new message / profile / notes)	N/A	Critical: Network connectivity issues	no	
Task 3	Find the help or Support section	10s	Search function for help is not intuitive.	yes	
Task 4	Share content FROM/TO app to another app	10s	Loading share sheet is slightly delayed.	yes	
Task 5	Delete an item (message, account entry, saved item)	15s	Confirmation dialog lacks visual prominence.	yes	
ADDITIONAL USABILITY CHECKS					
Feature	What to Evaluate	Issue status	Rating Impact	Score	
Error messages	Are error messages clear and explain how to fix the issue?	Not needed. Prior error is specific, last Payment error is generic.	Moderate Negative	1/5	
Visual Hierarchy	Is the most important info most prominent on key screens?	Yes, search inputs are clearly defined.	Positive	4/5	
Onboarding	Is there any in-app onboarding / tutorial for new users?	Yes, intuitive flow for new users.	Positive	4/5	
Accessibility	Does the app support large text, high contrast, screen reader?	Supports standard OS accessibility.	neutral	4/5	
CHARACTERISTIC 4 RATING (1-5):		Justification:			

Justification :High: "One-tap" interface minimizes user cognitive load, making it ideal for quick bookings.

Characteristic 5 (Reliability)

B.6 CHARACTERISTIC 5 — Reliability (Weight: 15%)			
Check	What to Look For	Result	Notes
10-min continuous use	Use app continuously for 10 minutes — note any crashes or freezes	pass	App remained stable; no crashes during idle or active UI usage.
Airplane Mode test	Enable Airplane Mode mid-session — observe how app handles no connectivity	fail	App fails to display a meaningful "Offline" warning; stops responding.
Reconnect recovery	Re-enable connectivity — does the app recover gracefully and sync data?	fail	Input state (e.g., search queries) is lost after network restoration.
Force-close mid-task	Force-close the app mid-task — is your progress saved when you reopen?	pass	App preserves the session state upon relaunching.
Server error messaging	Check if the app shows meaningful error messages when server is unreachable	fail	Errors are generic: ("Operation is unavailable") rather than actionable.
CHARACTERISTIC 5 RATING (1-5):		Justification:	

Justification :System handles state perfectly; re-connection is seamless even during network switches

Characteristic 6 (Security)

B.7 CHARACTERISTIC 6 — Security (Weight: 15%)			
Check	What to Look For	Result	Notes
HTTPS / encryption	Check: does the app use HTTPS? (look for padlock in web version)	pass	Standard SSL/TLS encryption active on web/API.
Permissions audit	Review permission list in OS settings — are all permissions justified by the app's purpose?	pass	All requested permissions (Location, Camera) are justified for ride features.
2FA / biometrics	Check: is 2FA / biometric login available in settings?	pass	Biometric (Fingerprint/Face ID) login is supported and active.
Privacy policy review	Review Privacy Policy — what data is collected? Is it sold to third parties?	pass	Privacy policy is clearly accessible and standard data usage explained.
Login lockout	Test: what happens after 3 incorrect password attempts?	pass	Account triggers temporary lockout after 3 failed password attempts.
Auto-lock on inactivity	Check: does the app lock automatically after a period of inactivity?	fail	App maintains an active session indefinitely; lacks auto-timeout for security.
CHARACTERISTIC 6 RATING (1-5):		Justification:	

Justification :Uses standardized encryption and secure payment gateways for all transactions.

Characteristic 7 (Maintainability)

B.8 CHARACTERISTIC 7 — Maintainability (Weight: 8%)			
Check	What to Look For	Result	Notes
Update frequency	Check app's update history: how frequently are updates released?	Frequent	Regular bi-weekly updates indicating active maintenance.
Changelog quality	Read release notes / changelog: are bug fixes clearly documented with specific details?	Detailed	Bug fixes and improvements are documented clearly.
Open bugs review	Check app store reviews mentioning long-standing unified bugs.	Moderate	Some long-standing issues with network timeouts reported by users.
CVE response history	Note how quickly the developer responded to critical security vulnerabilities historically	strong	Developer promptly addresses critical vulnerabilities.
Bug tracker / channel	Check if a public bug tracker or feedback channel exists	internal	No public bug tracker, feedback is via app support only.
CHARACTERISTIC 7 RATING (1-5):4			Justification:

Justification Frequent server-side updates allow for feature deployment without requiring full app re-installs.

Characteristic 8 (Portability)

B.9 CHARACTERISTIC 8 — Portability (Weight: 10%)			
Check	What to Look For	Result	Notes
Platform support	Check which platforms app supports: iOS, Android, Windows, macOS, Web, Linux?	wide	Supports iOS, Android, and Web platforms natively.
Install / uninstall	Test installation and uninstallation process — is it clean with no residual files?	clean	Leaves no residual files or hidden data after uninstallation.
Cross-device data sync	Check if settings and data sync across devices automatically.	pass	User settings and ride history sync seamlessly across devices.
Accessibility sync	Verify the app respects system accessibility settings (font size, dark mode)	pass	App automatically adopts OS-level dark mode and font settings.
CHARACTERISTIC 8 RATING (1-5):5			Justification:

Justification: Responsive design adapts flawlessly to different screen ratios, from entry-level to flagship phones.

App2:InDrive

Characteristic 1 (Functional Suitability)

APP 2 METADATA			
App 2 Name	InDrive		
Version Number	5.164.0		
Device Model	Infinix X6816C		
OS Version	11		
Evaluation Date	21-4-2026		
Start Time	3:30		

C.1 CHARACTERISTIC 1 — Functional Suitability (Weight: 15%)			
Feature / User Case	How to Test	Pass / Fail / Partial	Notes
Primary core function	Request a ride (pickup to destination)	Pass	User can enter route and view accurate fare estimates instantly.
Secondary feature 1	Access the fare estimation screen and utilize the fare bidding feature	pass	The app successfully allows users to modify the recommended fare (PDR 1.43) and submit their own offer before finding drivers.
Secondary feature 2	Track ride status on map	pass	The app's mapping interface correctly renders the route between pickup and destination, enabling clear ride tracking visualization.
Error handling	Input invalid pickup location.	pass	App correctly identifies invalid inputs and shows a "No results" error instead of crashing.
Edge case	No internet during ride request.	partial/fail	The app enters an indefinite loading state ("uploading" icon) and does not display an explicit "No Internet" connection error message.
			Justification:

Justification: Offers unique "Bidding" feature, but requires user input, making it functional but less automated.

Characteristic 2 (Performance Efficiency)

C.4 CHARACTERISTIC 2 — Performance Efficiency (Weight: 12%)			
Test Scenario	Test Method	Test Result	Notes
App launch time	Stopwatch, tap app icon — fully visible screen	< 3 seconds	App opens quickly to map view without delay.
Core operation 1 (search/estimate)	Enter the main action (search/estimate) quickly	< 2.5 seconds	Fare estimation loads instantly upon entering route.
Core operation 2 (bidding)	Enter a secondary action (navigate/location change)	< 1 second	Loading ride history or settings is smooth.
Startup drain	Device Settings > Battery: % used in 10 min active use	< 2%	Tested over 10 minutes of active booking/tracking.
Slow network	Switch to 4G only / poor signal — time for operation	< 5 seconds	App maintains functionality even on 4G poor signal.
Data usage	Device Settings > Data: MB used in 10 min active use	< 10 MB	Usage during 10 minute active ride booking session.
CHARACTERISTIC 2 RATING (1-5):5			Justification:

C.5 CHARACTERISTIC 3 — Compatibility (Weight: 10%)			
Test Scenario	Test Method	Test Result	Notes

Justification: Real-time negotiation phase adds overhead, causing slight latency during peak hours.

Characteristic 3 (Compatibility)

C.3 CHARACTERISTIC 3 — Compatibility (Weight: 10%)				
Compatibility Check	What to Look For	Result	Notes	
Min OS version	Check Play Store / App Store listing for minimum supported OS	pass	Supports Android 7.0+ and iOS 12.0+ as per official store requirements.	
Platform availability	List all platforms: Android, iOS, Windows, macOS, Web, Linux	pass	Available on both Android (Google Play) and iOS (App Store).	
Cross device sync	Test on two test devices — do data & settings appear?	pass	Account data and ride history sync successfully across devices.	
Content sharing (in)	Can you share content FROM other apps INTO this app?	pass	Opens correctly via external location sharing links.	
Content sharing (out)	Can you share content FROM this app to 3+ other apps?	pass	supports sharing ride receipts/trip info to WhatsApp, Email, etc.	
Dark mode support	Does the app respect your OS dark mode / accessibility settings?	pass	App correctly adapts to system-wide Dark/Light mode preferences.	
OS version compat.	Are features broken on your specific OS version?	pass	No bugs or crashes observed on current OS version.	
CHARACTERISTIC 3 RATING (1-5):		5	Justification:	

Justification: Maintains consistent UI/UX and feature availability across different mobile platforms.

Characteristic 4 (Usability)

C.4 CHARACTERISTIC 4 — Usability (Weight: 35%)				
Task	Task Description	Time (sec)	Errors Made	Completed?
Task 1	Find and change a core setting	5s	0	yes
Task 2	Perform the primary function for the product (e.g. make a reservation)	12s	0	yes
Task 3	Find the help or Support section	25s	1	yes
Task 4	Share trip content to another app	5s	0	yes
Task 5	Delete a history entry/saved item	7s	0	yes
ADDITIONAL USABILITY CHECKS				
UI Check	Why did I evaluate	Observation	Rating Impact	Score
Error messages	Are error messages clear and explain how to fix the issue?	Clear, but sometimes generic (e.g., "No results"). Could be more descriptive.	Minor	45
Visual hierarchy	Is the most important info most prominent/eye-catching?	Highly effective: route and price are clearly prioritized on the main screen.	High	95
Onboarding	Is there any in-app onboarding/tutorial for new users?	Minimal: the app relies on intuitive flow rather than heavy tutorials for new users.	Moderate	45
Accessibility	Has the app been tested against WCAG guidelines?	Supports standard OS test scaling and maintains high contrast for visibility.	Moderate	5 (high)
CHARACTERISTIC 4 RATING (1-5):		4.5	Justification:	

Justification: Requires more steps (bidding/selection), which is good for control but takes more user effort.

Characteristic 5 (Reliability)

C.5 CHARACTERISTIC 5 — Reliability (Weight: 15%)				
Check	What to Look For	Result	Notes	
10 min continuous use	Use app continuously for 10 minutes — note any crashes or freezes	pass	App remains stable during 10 minutes of active interaction.	
Alphabet Mode test	Enable Alphabet Mode mid-session — observe how app handles no connectivity	fail	App enters an indefinite "spinning" loading state; no explicit "No Internet" error message is displayed.	
Reconnect recovery	Is stable connectivity — does the app recover gracefully and sync data?	pass	Session recovers and syncs data once connectivity is restored.	
Force-close mid-task	Force-close the app mid-task — is your progress saved when you reopen?	pass	App state is saved; task can be resumed upon re-opening.	
Server error messaging	Check if the app shows meaningful error messages when server is unreachable	pass	Meaningful feedback (e.g., "No results") is provided for invalid inputs/queries.	
CHARACTERISTIC 5 RATING (1-5):		4	Justification:	

Justification: Occasional timeouts occur if a bid is not accepted quickly during high traffic.

Characteristic 6 (Security)

C.6 CHARACTERISTIC 6 — Security (Weight: 15%)				
Check	What to Look For	Result	Notes	
HTTPS / encryption	Check: does the app use HTTPS? (look for padlock in web version)	pass	App uses secure TLS/SSL encryption for all data transmissions.	
Permissions audit	Review permission list in OS settings — are all permissions justified by the app's purpose?	pass	Permissions requested (Location, Camera, Storage) are necessary for core functionality.	
2FA / biometrics	Check: is 2FA / biometric login available in settings?	partial	2FA is implemented via OTP (SMS verification); specific biometric app lock not found.	
Privacy policy review	Review Privacy Policy — what data is collected? Is it sold to third parties?	pass	Clearly accessible via the menu; defines data collection and third-party usage.	
Login lockout	Test: what happens after 3 incorrect password attempts?	pass	System caps login attempts after 3-5 failed entries to prevent brute force attacks.	
Auto-lock on inactivity	Check: does the app lock automatically after a period of inactivity?	fail	App does not auto-lock; this prioritization of user convenience over strict security is common in this category.	
CHARACTERISTIC 6 RATING (1-5):		4.5	Justification:	

Justification: Effective OTP and driver verification, though the open bidding model shows limited user profile data.

Characteristic 7 (Maintainability)

C.9 CHARACTERISTIC 7 — Maintainability (Weight: 8%)			
Check	What to Look For	Result	Notes
Update frequency	Check app's update history: how frequently are updates released?	pass	Updates are pushed regularly (typically every 2-4 weeks) to address performance.
Change log quality	Read release notes / change log: are bug fixes clearly documented with specific details?	partial	Release notes are often generic (e.g., "Performance improvements") rather than detailed.
Open bugs review	Check app store reviews mentioning bug-standing unfixed bugs	pass	Developers actively respond to user reviews in the app store.
CVE response history	Note how quickly the developer responded to critical security vulnerabilities historically	pass	Standard security patches are integrated into regular release cycles.
Bug tracker / channel	Check if a public bug tracker or feedback channel exists	pass	Accessible in-app support/contact channel allows users to report issues directly.
CHARACTERISTIC 7 RATING (1-5):4			

Justification :Modular architecture allows the backend to update pricing logic without disrupting the frontend.

Characteristic 8 (Portability):

C.10 CHARACTERISTIC 8 — Portability (Weight: 10%)			
Check	What to Look For	Result	Notes
Platform support	Check which platforms app supports: iOS, Android, Windows, macOS, Web, Linux?	pass	App is natively available on Android and iOS platforms.
Install / uninstall	Test installation and uninstallation process — is it clean with no residual files?	pass	Installation is standard; uninstallation is clean with no residual files.
Cross-device data sync	Check if settings and data sync across devices automatically	pass	User profile, ride history, and settings sync automatically via cloud account.
Accessibility type	Verify the app respects system accessibility settings (font size, dark mode)	pass	App successfully respects system-level accessibility settings like font scaling and dark mode.
CHARACTERISTIC 8 RATING (1-5):5			

Justification :Consistent layout ensures all bidding controls are accessible on small or large screens.

Table: weighted score calculation:

App	Score
Uber	3.60/ 5
InDrive	4.27/ 5

FULL EVALUATION CHECKLIST				
Quality Characteristic (ISO 25010)	Rating (1-5)	Weight	Observations / Evidence (min. 2 specific points)	Weighted Score
1. Functional Suitability	3	15%	Ride booking failed ("No rider available") and payment entry returned "Operation is unavailable".	0.45
2. Performance Efficiency	4	12%	Cold start in 2.5s (P90); however, when network slower 7.5s load/refresh.	0.48
3. Compatibility	5	10%	Supports Android 8.0 (P90); cover device history/features app works correctly.	0.50
4. Usability	3	15%	Navigation depth is high (3 clicks); Help function is not intuitive.	0.45
5. Reliability	2	15%	Fails Airplane Mode test; provides generic error message instead of actionable steps.	0.30
6. Security	4	15%	Supports 2FA (SMS/Email); lacks auto-lock feature on inactivity.	0.60
7. Maintainability	4	8%	Frequent updates; active maintenance but relies on intermittent testing (see public feedback).	0.32
8. Portability	5	10%	Wide platform support; clean installation with no residual files.	0.50
WEIGHTED TOTAL SCORE (out of 5.00)				3.60

FULL EVALUATION CHECKLIST				
Quality Characteristic (ISO 25010)	Rating (1-5)	Weight	Observations / Evidence (min. 2 specific points)	Weighted Score
1. Functional Suitability	4	15%	Bidding/negotiation system works seamlessly; highly transparent.	0.75
2. Performance Efficiency	5	12%	Cold startup <2.5s; map rendering is smooth.	0.48
3. Compatibility	5	10%	Fully compatible across Android versions.	0.50
4. Usability	4.5	15%	Intuitive bidding UI; direct and clear navigation.	0.60
5. Reliability	4	15%	Stable connection handling; good state recovery.	0.60
6. Security	4.5	15%	Phone number verification & standard encryption.	0.60
7. Maintainability	4	8%	Updates are regular; feedback loop is active.	0.24
8. Portability	5	10%	Lightweight app size; clean install/uninstall.	0.50
WEIGHTED TOTAL SCORE (out of 5.00)				4.27

Uber outperforms inDrive overall with a weighted score of [3.60] vs [4.27]. The biggest gap appears in **Performance Efficiency**, where Uber shows faster request processing, better server-side dispatch logic, and lower latency. inDrive consumes more resources during the real-time bidding negotiation process, making it slightly slower in high-demand zones compared to Uber's automated dispatch.

Another major difference is in **Functional Suitability**. Uber provides reliable and consistent automated dispatch functionality, while inDrive introduces innovative features like peer-to-peer fare negotiation but can occasionally suffer from matching delays or driver availability issues during the live bidding phase.

In **Usability**, both apps scored well but for different reasons. Uber excels in 'one-tap' simplicity and a streamlined interface, while inDrive offers more user control through active fare selection but requires more cognitive effort from the passenger during the request negotiation process.

A clear trade-off exists:

- **Uber** → Fast, standardized, and highly reliable.
- **inDrive** → Flexible, price-controlled, and negotiation-based.

Thus, Uber is better for performance-focused users who prioritize speed and reliability, while inDrive suits users who prefer cost control and personal choice in their transit experience.

Recommendations:

Uber

App 1 — Recommendation 1	
Field	Your Answer
App Name	Uber
Specific Action	Implement robust network connection handling and replace generic errors with specific, actionable troubleshooting steps (especially for the Airplane Mode test case).
Characteristic Improved	Reliability
Current Rating	2
Target Rating	4
Specific Deficiency Observed	The app fails the Airplane Mode test and provides generic error messages instead of actionable steps when the connection is lost.
User Benefit	Users will receive clear, helpful feedback during network interruptions, allowing them to effectively resolve connectivity issues or retry, which increases overall trust in the booking process.
Complete Recommendation (paragraph form)	Uber should implement robust connection handling and provide actionable, specific error messages instead of generic ones in order to improve Reliability from its current rating of 2 to a target of 4. Currently, the app fails the Airplane Mode test and provides non-actionable error messages. This change would help users resolve connectivity issues quickly, reducing frustration during network interruptions.

App 1 — Recommendation 2	
Field	Your Answer
App Name	Uber
Specific Action	Simplify the navigation structure to reduce clicks for core tasks and redesign the Help interface to be more intuitive for the user.
Characteristic Improved	Usability
Current Rating	3
Target Rating	5
Specific Deficiency Observed	Navigation depth is high (3 clicks) and the Help function is not intuitive.
User Benefit	Users will be able to access core features faster, and an intuitive Help interface will ensure they can resolve issues independently, significantly enhancing the overall user experience.
Complete Recommendation (paragraph form)	Uber should simplify its navigation structure and redesign the Help interface in order to improve Usability from its current rating of 3 to a target of 5. Currently, the navigation depth is high (3 clicks) and the Help function is not intuitive. This change would allow users to access core features more quickly and resolve issues with less friction, significantly enhancing the overall user experience.

InDrive:

App 2 — Recommendation 1	
Field	Your Answer
App Name	InDrive
Specific Action	Implement a public-facing issue or bug tracker to enhance transparency regarding development updates.
Characteristic Improved	Maintainability
Current Rating	4
Target Rating	5
Specific Deficiency Observed	The app relies entirely on internal bug tracking with no public visibility into development progress.
User Benefit	Providing public visibility into bug fixes and features increases user trust and allows the community to better understand the development cycle.
Complete Recommendation (paragraph form)	

App 2 — Recommendation 2	
Field	Your Answer
App Name	InDrive
Specific Action	Optimize screen transition animations and streamline rendering processes to ensure smoother and faster UI updates.
Characteristic Improved	Performance Efficiency
Current Rating	4
Target Rating	5
Specific Deficiency Observed	Screen transitions are functional but could be faster and more optimized for a smoother feel.
User Benefit	Users will experience a more responsive and fluid interface, reducing perceived wait times and increasing overall satisfaction during navigation.
Complete Recommendation (paragraph form)	

Comparsion chart:
